## Announcements

→ HW 2 in progress.

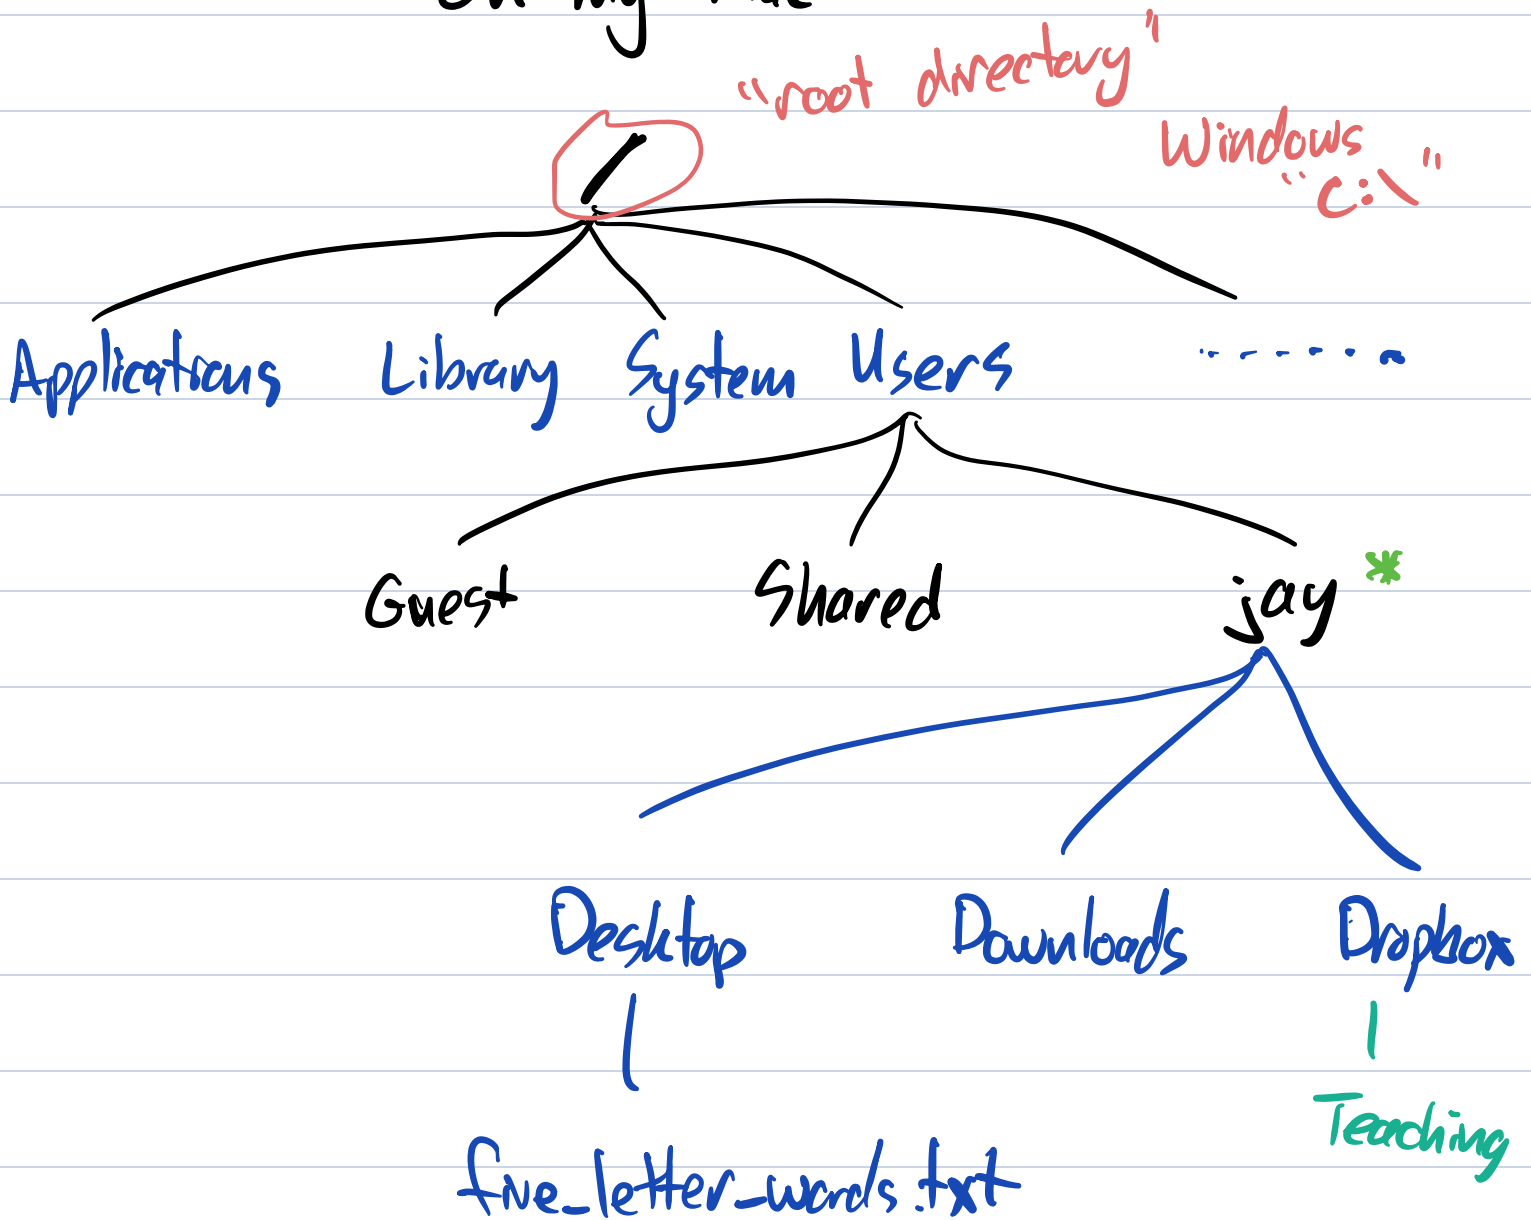

→ Office Hours!

<b>Office Hours:</b>	Monday,	2:30pm - 3:30pm
	Wednesday,	2:00pm - 3:00pm
	Thursday,	10:30am - 11:30am
<i>Cudahy Hall 307</i>		and by appointment

## Lecture #4 - Unix Command Line

# File System

On my mac:

Every file has a "full address"  
/Users/jay/Desktop/five\_letter\_words.txt

Windows: "Git Bash" / "Git for Windows"  
Mac/Linux: "Terminal"

(1) pwd "present working directory"  
says which folder in the filesystem  
the terminal is currently active in

(2) ls "list" displays the files  
in the current folder

Most commands have extra arguments  
"flags" that you can pass to change  
the behavior.

"ls    -l" lists the files but with  
extra information  
↑  
space

"manual page" = "man page" for every  
command that tells you all of the  
optional arguments  
↳ "q" to exit

You can also tell ls and many other commands to focus on certain files.

\* = wildcard = matches any symbol

ls -l \*.txt list full info for all files in the current folder that end with ".txt"

ls -l p\*      ls \*.txt

(3) cd - "change directory"  
moves to a different place in the file structure

cd [directory]

If your directory starts with a "/", you are specifying an "absolute path"  
full path from the root

cd /Users/jay/Desktop

If it doesn't start with a "/" it's a "relative path" - file address based on the current active folder.

```
cd Desktop
```

Shortcuts: ". ." - current folder you're in  
(not helpful for cd)

".." - go up one folder

"~" - user's home folder  
(/Users/[username])

/home/ ...

```
> cd (~)/Dropbox/Teaching
```

```
> pwd
```

```
/Users/jay/Dropbox/Teaching
```

```
> cd ../.. / Desktop
```

```
> pwd /Users/jay/Desktop
```

"Tab Completion" - if you write part of a file or folder name and hit tab, it will try to finish it

(4) `mkdir [name]` makes a folder

`mkdir hello` - makes a folder called "hello" in the p.w.d.

`mkdir /Users/jay/Desktop/hello`

(5) `mv [current location] [new location]`

Relocate a file / folder

Rename a file / folder

(6) `cp [current location] [new location]`

copies a file or folder

need "-R" flag

`cp hello.txt world.txt`

`cp -R my-folder new-folder`

copy all the files in folder "A" to folder "B"

`cp A/* B`

`cp * .. /B`

(7) `rm [file or folder]`

"remove" / delete files or folders

↑ -R flag

⚠ This is a dangerous command.

"`rm -rf /`" will delete every file on your computer, with no recycle bin.
